- Disaster Recovery
- Asset Management
- Technology Refresh
- Disposition

## GREEN COMPUTING

There was a time when business success and environmental responsibility were rarely discussed in tandem. Today, senior-level IT professionals realize that energy-efficient solutions are often the best answer to difficult questions surrounding operational efficiency and cost controls.

### NEXT GENERATION DATA CENTERS

Most organizations find themselves forced to consider the facts: physical space constraints, power and cooling concerns, and rising operational costs deeply affect data center performance. Evolver is on the leading edge of a business movement designed to help IT organizations realize their true operational potential while simultaneously reducing operational costs. The truth is both simple and powerful...environmental responsibility now makes good business sense.

### SMALL STEPS = EVOLUTION

Consolidation. Virtualization. Power Management. Individually, these can seem like small steps; however, taken together, these and other practices provide the framework necessary to create truly sustainable computing. Moving your data center operations forward will allow your IT organization to fulfill its mission of supporting business growth and speeding innovation.

### THE FIRST STEP

Evolver is ready to support your organization as you look toward optimizing your efficiencies and reducing both costs and risks. Our subject matter experts will provide a comprehensive analysis of your data operations along with recommendations. We will provide the plan necessary to implement approved changes to the environment. We will provide the necessary technical support along with a Metrics and Maintenance plan. In short, we will partner with you each step of the way.

That's Progress... **THAT'S EVOLVER**
