

SUPPLY CHAIN PLANNING

FEATURES

- Demand Planning
- Network Planning
- Inventory Planning
- Transportation Planning
- Customer Satisfaction
- Contingency Planning

The federal government manages supplies for many types of enterprise operations. Management of the associated supply chains can yield vast improvements to on-time delivery while reducing inventory, transportation, and distribution costs. Demand forecasting for variable and seasonal products can wreak havoc on supply chain planning at all levels.

Understanding the interdependencies of all these factors, combined with the sourcing and planning policies, allow the government to optimally manage a supply chain, thereby meeting customer delivery dates while minimizing overall costs.

Government leadership needs a partner who understands the very difficult and volatile landscape of the supply chain domain. Evolver has a specialized supply chain team available to optimally design large-scale supply chain networks.

Our experience with a variety of supply chain decision support tools gives us the unique ability to understand your specific problems while bringing the right tools and analysts to the table at the right time. Let us help you realize your optimal supply chain vision of the future today.

That's Progress... **THAT'S EVOLVER**
